

July, 2025

Press Release: EY and SGS Collaborate to Promote Sustainable Gastronomy at Expo 2025 Osaka, Kansai, Japan.

Osaka, Japan – July, 2025 – EY and SGS are proud to announce a joint collaboration aimed at promoting sustainable gastronomy at Expo 2025 Osaka, Kansai, Japan. This partnership will feature a major forum at the Expo, "The Future of Food Conference," including the launch of an online digital platform designed to unite businesses, communities, and international leaders in sustainable and regenerative agriculture and aquaculture. A key sub-theme of this initiative, "Food Education and Health Management," will connect sustainable food systems with human well-being, fostering a vision where food is recognized as a common good for humanity.

Engaging in Dialogue for a Sustainable Future

Food and food systems are pivotal to our culture, economy, and environment. They manifest locally but have far-reaching international implications. As we face challenges such as climate change, biodiversity loss, and geopolitical tensions, these systems are increasingly at risk. Transforming these challenges into opportunities requires robust collaborations and effective public-private partnerships (PPPs). Through "Food Education and Health Management," this initiative will also empower individuals and organizations to enhance community health and workplace productivity, linking sustainable gastronomy with tangible societal benefits. To facilitate this transformation, EY and SGS will invite local leaders from all 47 Japanese regions to engage in meaningful discussions with business leaders, academics, and Expo attendees. Together, we will explore the specific needs and strategies required to build an inclusive and sustainable food system that benefits all. The forum will highlight how food education can drive awareness of sustainable practices and how health management can align corporate goals with regional and global well-being.

Join Us in Shaping the Future of Food

EY and SGS invite you and your organizations to be part of this innovative dialogue. Together, we can shape a sustainable future for food systems in Japan and beyond, where food education nurtures informed choices and health management strengthens resilient communities.

climate science, environmental policy, and sustainable finance, the CCaSS team assist clients in integrating sustainability into their core operations, enhancing resilience, and achieving their environmental and social goals while driving long-term value.”

About SGS...

“The Sustainable Gastronomy in Society (SGS) is an organization dedicated to addressing the growing global challenges related to food. Our mission is to promote the production and consumption of safe, healthy, and future-oriented food.

We aim to build a network that connects a wide range of stakeholders involved in all stages of the food system—production, processing, distribution, and consumption—including local farmers and producers, businesses, universities, government agencies, restaurant owners and chefs, and consumers like ourselves.

Our initiatives focus on promoting environmentally responsible and nutritious food production, developing traceability systems to ensure food safety, reducing food loss and waste, and preserving diverse food cultures. By valuing the role of local communities, we strive to advance these efforts on a global scale. ”
